

Jobcenter København

The Municipality of Copenhagen has consolidated many of its employment services into a new, large Jobcenter in Valby. The facility spans several buildings across multiple floors and is home to 1,100 advisors and support staff working there on a daily basis.

Covering a total area of 36,000 m², the Jobcenter can receive up to 2,000 visitors in a single day.

The center has its own dedicated security team to protect staff in the event of threatening situations.

All employees carry a ZONITH ID card holder with their access card inserted. The holder features a discreet panic button on the back. In addition, fixed wireless panic buttons are installed in meeting rooms and reception areas throughout the facility.

Together with ZONITH's control room software, these panic buttons provide employees with a fast and discreet alarm system, helping to ensure rapid assistance and prevent situations from escalating into threats.

Indoor and Outdoor Protection

ZONITH's Bluetooth receivers are installed throughout all buildings. The receivers both scan for panic alerts and determine the location of the person who pressed a panic button. The security system also automatically notifies the nearest security officer, helping to defuse potentially dangerous situations as quickly as possible.

To protect employees outside the building, Bluetooth receivers are installed in weatherproof enclosures. In the event of an emergency outdoors, staff can press the panic button on their ID card holder, immediately informing the security team where to respond to provide assistance.

Control Room

All alarms are automatically sent to the center's security team radios while simultaneously being displayed on screens in the job center's control room.

Key Benefits

- **Discreet alerting.** Staff carry ID card holders with built-in panic buttons, and wireless alarm buttons are installed underneath reception desks as well as in meeting rooms.
- **Fast response times.** The security team receives panic alerts instantly, with precise information about the location where the alarm has been triggered.
- **Easy installation and administration**
- **Long battery life.** The ID card holders and fixed panic buttons offer extended battery performance.
- **Complete indoor and outdoor coverage.** Panic alerting and positioning function both inside and outside the building.
- **Enhanced situational awareness.** With the positioning system, the security team can see who is inside the building and who has left in the event of an emergency.

"We have been using ZONITH's security system for our staff for many years in other job centers. Now that we have moved into our new, large job center in Valby, it was natural for us to install the latest version of the security system to ensure that staff can discreetly request assistance without the citizens noticing."

Bjarne Hansen, Operations Manager
